N4 VIEW BUILDER

A Modern User Interface

Gain valuable insight into your data by showing it on a dashboard that contains menus, buttons, graphs, gauges, tables, controls and other widgets.

Responsive Dashboards for Today's Customer where you can express your own brand. Create Your Own Views using View Builder™. Built with the fastest web technologies, React, Redux, and Material UI. React will efficiently update and render just the right components when your data changes. Cross-Platform usage and responsive design using Google's Material Design Guidelines & Best Practices.

VIEWS

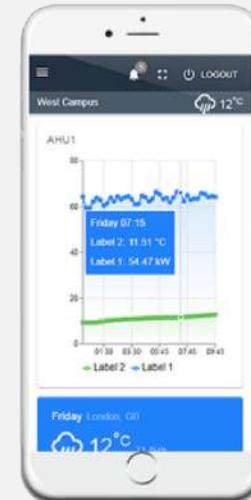

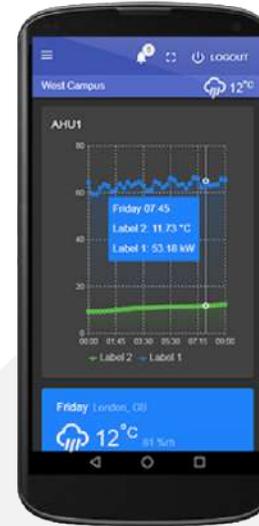

Use pre-built views or create your own Views using View Builder. Additionally, switch between a Light and Dark theme. Not enough? Go further and customise colours in advanced options.

SMALL FOOTPRINT

No installation required. No external services. Minified to less than 1mb. Just few files to be copied to a directory of your choice. Allows interaction to be super fast.

MULTI LEVEL ACCESS

Only a super-user can modify the dashboard, while standard operators can see their views. Use as much or as little as you like.

**Allow
consumers to
access data
anywhere
24/7/365**

LAPTOP

Best viewed in
1920x1080 resolution.
Consumers receive
real-time updates
automatically

MOBILE

Material UI latest
responsive design with
mobile architecture,
built for speed

TABLET

Templates have a
light footprint, some
as small as 55kb, allow
for super fast screen
rendering

PX VIEW

Includes a navigation menu, dark light theme, multi-level access and embeds existing PX graphics

ALARM VIEW

In addition to all the features of PX View, the alarm view allows you to manage system alarms

ENERGY

The energy consumption shows site analytic data gathered from device histories

SCHEDULING

Scheduling View allows you to modify equipment schedules from anywhere.

FLOOR/EQIP CCTV

Floor Plan Zoning, Cctv & Equipment Builder allows you to add polygon shapes over your existing images and display point values

VIEW BUILDER™

Use the pre-built views below or create your own views using using View Builder™

TECHNOLOGY

Built with the latest HTML5 web technologies:

Facebook React-
Material UI-
Redux-

DASHBOARD NAVIGATION

As the super-user you will go through your stations configuration and apply views (or your custom views) to each station object. Additionally, set each asset to either show/hide on the navigation menu. When a user logs on only those assets will appear in the menu with their respective views.

The screenshot shows a web interface for configuring dashboard navigation. At the top, there are four tabs: GENERAL, NAVIGATION (which is active and underlined), VIEWS, and ABOUT. Below the tabs, the left sidebar is titled 'Drivers' and contains a search bar and a tree view. The tree view is expanded to show 'Schedules' under 'Graphics', with 'AHU Schedule' selected. The right panel is titled 'Name' and shows 'AHU Schedule'. Below this, there is a 'Display Name' dropdown menu with the following options: None, PX View, Energy Consumption View, Scheduling View (which is highlighted), and Floor Plan Zoning View. A checkmark is visible at the bottom of the dropdown menu.

Acknowledge All

ENERGY CONSUMPTION

Show current energy consumption, power, cost, and weather with a 5-day forecast.

FLOOR PLAN/OCCUPANCY/CCTV VIEW & EQUIPMENT BUILDER

The Floor Plan/Occupancy Zone View & Equipment Builder allows you to add polygon, rectangles, and lines over your existing images to display point values. You can also build animated graphics e.g. Equipment graphics. Add images and bind them to point values. Images and values update in real-time. Show live camera feeds and place icons over images. Setup is done via your browser so you don't need to install any extra components.

USE EXISTING PX GRAPHICS

Embed your existing PX graphics with full functionality.

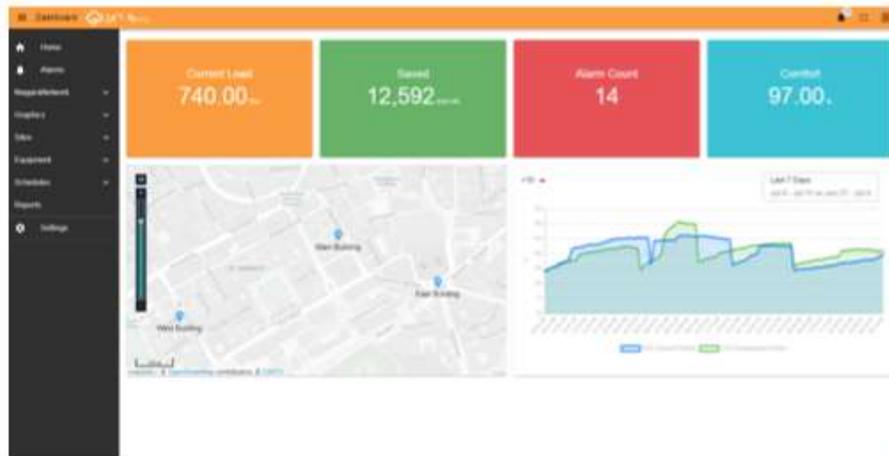

VIEW BUILDER™

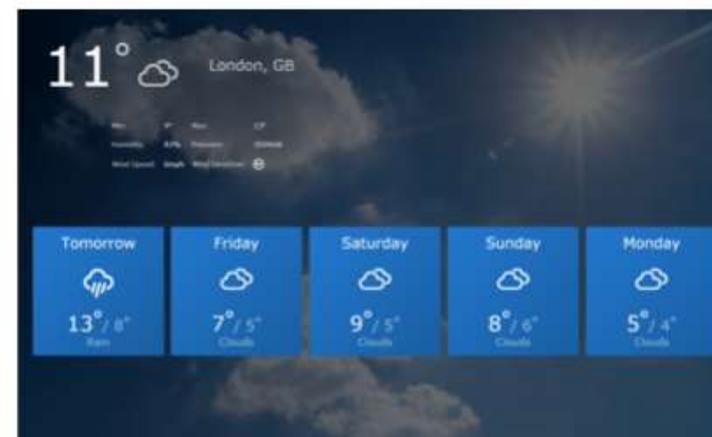

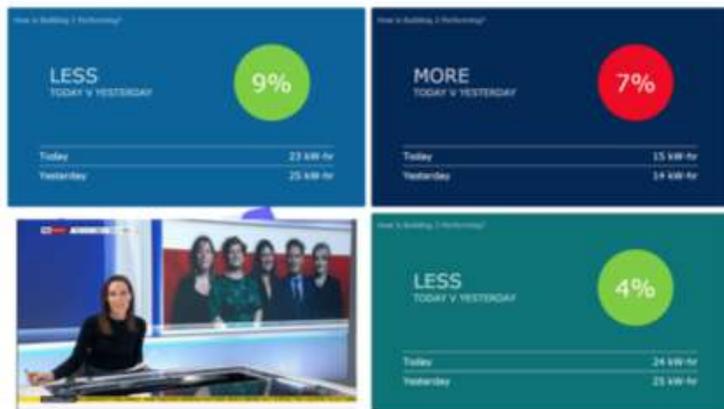

N4 View builder™ allows you to build custom dashboards by dragging n' dropping widgets into tab or grid style interface.

VIEW BUILDER™ EXAMPLES

MORE VIEW BUILDER™ EXAMPLES

N4 INSIGHTS™ N4 ANALYTICS & REPORTING

N4 Insights™ is a data and analytics module. Station trends or histories are processed to provide feedback into a station to optimize energy, reduce faults, and create actionable insights. N4 Insights doesn't require any complex tagging or have any license limits. It uses implied tags and BQL to retrieve the data required for analysis.

Add N4 Analytics into View Builder. Create graphs and charts from your existing N4 Analytic setup.

N4 Automated Reports - create daily, weekly, monthly automated reports. Drag n' drop histories, points, alarm tables, and other niagara objects onto email templates. Or use it for tenant billing purposes.

WORKS SOFTWARE integrate everything

We are a software development and integration company specialising in integrating different types of systems, technologies, and developing software solutions. We turn data into dashboards, graphs, gauges, control and other user friendly UI. Our software solutions are being used by some of the largest companies in the world across 30 countries, including, Apple, AT&T, US Engineering, BAE, Honeywell, General Motors, Trend, General Dynamics and our Tridium partners.
